DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi et al. P.N. 4,777,512 (Takahashi).

Takahashi discloses an image forming apparatus and method. Applicant's attention is directed to the description of Fig. 3A-B. Note that depending on the output of a toner quantity or content sensor the printing operation is stopped. See "flowchart box m".

This step of operation is akin to partially stopping the supply of power to each portion of the machine. The recited first and second detecting portions correspond to the YES and NO sensor output of "I". See col. 8 and 9.

Takahashi meets all the limitations of the claims at issue in their present form.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Katoh et al., Takura et al., Fournier et al., Yamada and Iida all disclose image forming machines having sensors for toner quantity. Note the abstracts of each of the disclosures.
